

Company History

Founded in 1994, Ozone Water Systems, Inc. is a leading global provider of complete ozone water purification solutions.

Ozone Water System's initial focus was the servicing of ozone generating equipment. We obtained factory training from such companies as Ozonia, Osmonics, PCI Wedeco, Pacific Ozone Tech, Hankin Ozone, Del Industries and Clearwater Tech in order to provide sales, parts and offer in-house or on-site repair service for their products. Through the servicing of ozone units OWS earned the trust and respect of our customers, which led to additional service contracts and company growth.

Over the years we have worked with various ozone equipment product lines, identifying which products work best in specific situations, and we quickly learned that successful ozone purification often requires the integration of more than one brand of component. This knowledge led us to where we are today. Working with various part manufacturers allows us to be a single source provider of turnkey ozone systems that are designed to be the best solution for your specific application.

We have designed, installed and serviced ozone systems used for Municipal Drinking & Waste Water, Theme Park Water Rides, Life Support for Aquariums, Clean-In-Place Systems for the Semiconductor Industry, Bottled Water & Food Processing Plants, Cooling Towers, DI Sterilization and even the Motion Picture Industry.

If you would like to test an ozone purification system before deciding to purchase, or if your need is temporary, we maintain a complete line of ozone related equipment readily available for rental or lease so the next time that you need help with ozone – information, service or assistance with a new project – give us a call.
